Project Overview

About FCG

FCG: Foreign Exchange Connect Global(abbreviated as FCG) is an online foreign exchange trading platform based on blockchain technology and concept, combining the high performance of centralized brokers with the high reliability of decentralized public chain perfectly, which aims to provide the global investors with a trading environment that is cheaper, more transparent, fairer and safer. The world-first mode“ foreign exchange trading equals mining “ integrates the blockchain technology and foreign exchange trading perfectly, which overturns the situation that brokers could not protect the clients’ interests and makes the clients’ transaction“risk-free“ (which means client can get value-added FCG when trading); Meanwhile, the disintermediation(IB) make it possible to return the margin to the clients.

As the platform token of FCG, FCG is the underlying assets of the contribution value of the users’ trading, which could be obtained through the reward system of “foreign exchange trading equals mining“.

The mode innovation and the technical innovation that the blockchain is applied to the foreign exchange trading of FCG will bring a new revolution to the traditional foreign exchange trading industry.

FCG will be the world-first consensus mechanism foreign exchange broker, which will benefits billions of traders around the world.

Missions

The brandnew mode that all can participate, and all can benefit will be formed based on the underlying design of the blockchain consensus mechanism.

It can truly realize the disintermediation (IB) and resolve the industry pain point based on the core framework of decentralization of blockchain.

It will create a more fair and transparent trading environment by making use of the blockchain mechanism that is open ,transparent and tamper-resistant.

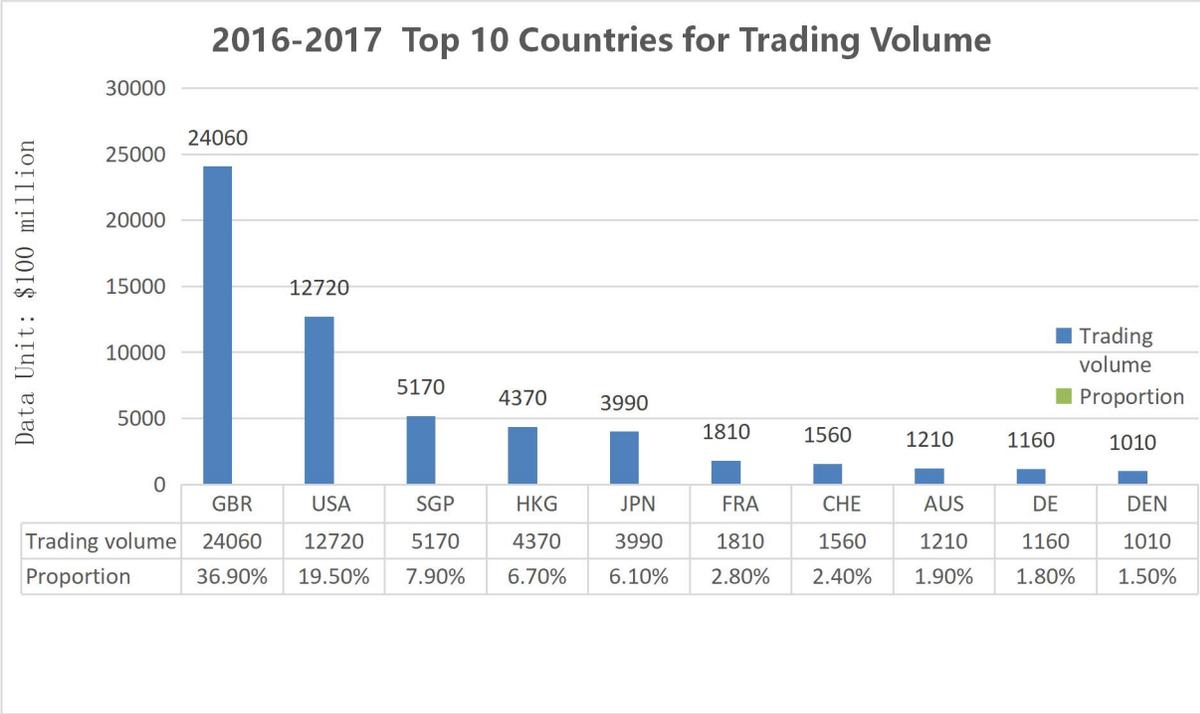

It can improve the payment efficiency of cross-border payment and reduce the payment cost by making use of blockchain technology.

Industry Background

The Overview of the Global foreign exchange Market

Led by the international trend of economic globalization and the liberalization of financial transactions, the market share of the online foreign exchange transactions increases day by day due to the development of modern technology despite that the large financial institutions and banks, as the main traditional market-makers, account for half of the foreign exchange market .Online foreign exchange trading platforms have simplified transaction processes and lowered transaction barriers, making it possible to trade almost anywhere in the world. A set of data shows that the foreign exchange market is the only market in the world that runs 24 hours a year and its average daily trading volume reaches USD6 trillion which is around 53 times of that of the New York Stock Exchange and the average annual trading volume is 4 times of the

global GDP. There are 9.6 million online traders worldwide, which means one in every 396 of the world's 3.8 billion Internet users . Over 70% of the respondents trade once every day, and 13% of the respondents trade over 10 times or even more every day.

The Status of Forex Trading Platforms

1. With the lower barrier for entry of the registered brokers, it is hard to distinguish the good from the bad.
2. The introducing broker (IB) becomes the reaper of the client and the broker, which means the interests of them are damaged.
3. The confusion in the regulatory makes the platform less secure.
4. The phenomenon that the platform interferes with user's transaction deliberately happens frequently.

5. The third-party payment channel suffers malice complaint repeatedly, which makes the cost of channel high.

Solutions

FCG entered the foreign exchange trading industry as an industry disrupter. With years of technical accumulation and decades of accumulated experience, it launched the world-first "blockchain foreign exchange trading platform", which thoroughly solved the industry's pain points to actively embrace the blue ocean market with global daily trading volume of \$6 trillion.

1.It is our mission to provide our clients with better service

As an innovator in the industry, FCG knows deeply its core business and mission. There are many companies pretending to be brokers namely to cheat money for fraud or provide illegal financial services in the market. The case of IGOFX with RMB30 billion fraud shocked the world, which was thought that it was caused by the unclear positioning. FCG is well aware of its duties and mission, while as a trading service provider, we always put the improvement of customer trading experience in the first place and we constantly strive for better quotation, smoother execution speed and better operation experience.

2.The application of blockchain technology can truly realize the disintermediation (NO IB)

The technology and the consensus mechanism of blockchain have become an irresistible trend, which impact the traditional internet technology and business model. The introducing broker (IB) has played a very important role in the development of the foreign exchange trading market. The existence of the

application of blockchain will clearly overturn the original foreign exchange business model.

FCG initiates the mode "forex trading equals mining ", which make it possible to return the IB profits to the investors directly so that everyone can benefit and maximize the interests as well as to create a win-win and co-governance foreign exchange trading institution.

3. Dual License of Forex Broker and Blockchain Exchange

FCG has obtained the dual license of foreign exchange broker and digital asset exchange of the Republic of Malta which is issued by the Prime Minister of Malta. Malta, as an renowned international financial center, attracts well-known financial companies from all over the world to settle here. More than ten years old, veteran foreign exchange trader FXDD and the world's largest digital currency exchange "monetary security" all take Malta as the first choice. The old and famous forex broker FXDD with decades of history and the world's biggest digital currency exchange "Binance" are both located there.

4. The Transaction Records are linked and Regulated by Everyone

Due to the fact that trading was completely controlled by brokers in the past, the phenomenon of platform intervention in clients' trading often occurs. With the continuous application of blockchain technology in the trading field, this phenomenon will gradually disappear. FCG becomes the world-first forex broker who put the trading data linked to the main chain by making use of the transparent and tamper-resistant of the blockchain technology. It is not only regulated by the national level but also regulated by the global investors.

5.Blockchain Payment can Truly Solve the Industry Pain Point

For example, Bitcoin, as the world-first digital currency, has become popular around the world, which was created just to solve the payment problem. The FCG TOKEN issued by FCG has the payment property of all the blockchain digital assets, while FCG will accept the FCG TOKEN as a payment way to replace the regular third-party payment companies which could greatly reduce the payment channel cost and make the customer's operation more convenient and easier.

FX Conect Global-FCG

1.FCG is short for Token on the main chain of FCG which was generated in the form of "trading equals mining" based on the issuance of the Ethereum ERC20 standard in the early stage. Users trade which means they are mining, while client who opens an account is regarded as "miners".The users will get FCG as a reward when they trade, and the users can convert the FCG owned into equivalent USD account according to the actual price of the Exchange.

2.Release Mechanism

FCG initially issues 6 billion FCGs and undertakes no additional issuance forever. Every year, it releases 20% of the balance of the incentive pool and the release share decreases year by year.

3.Mining Mechanism

FCG is distributed according to the user's trading contribution . When the client closes the position, we will release the corresponding FCG as the reward according to the actual trading volume of the user.As the FCG dwindles, FCG will adjust the speed of mining according to the market.

4.The function of FCG Token

A.Payment Tool

B.Investment Nature

C.Applying Attribute

D.Acceptance Nature

E.Profit sharing of the Broker

F.Ecological Consensus, Circulation on Main Chain

Token Proportion

Total Amount of Issuance

FCG initially issues 6 billion FCGs and undertakes no additional issuance forever.

The specific allocation is as follows:

Mining 60%

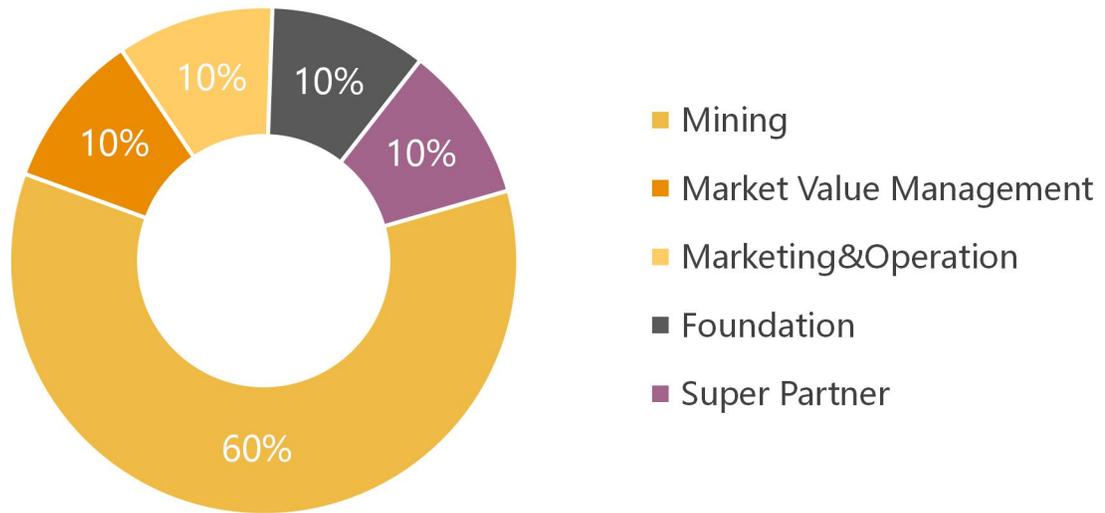

Market Value Management 10%

Marketing&Operation 10%

Foundation 10%

Super Partner 10%

Token Proportion

Mining

It is used to reward all trading users of the platform and automatically assign mining rewards according to the trading volume. FCG for mining accounts for 60% of the total issuance, and the total amount is 3.6 billion .

Marketing&Operation

It is used to expand the user scale of the platform rapidly, attract high-quality user resources and improve network activity. FCG for marketing and operation accounts for 10% of the total issuance, and the total amount is 0.6 billion .

Foundation

The foundation is a non-profit organization. The FCG it holds is used to ensure technology development as well as operation and maintenance costs. FCG for foundation accounts for 10% of the total issuance, and the total amount is 0.6 billion

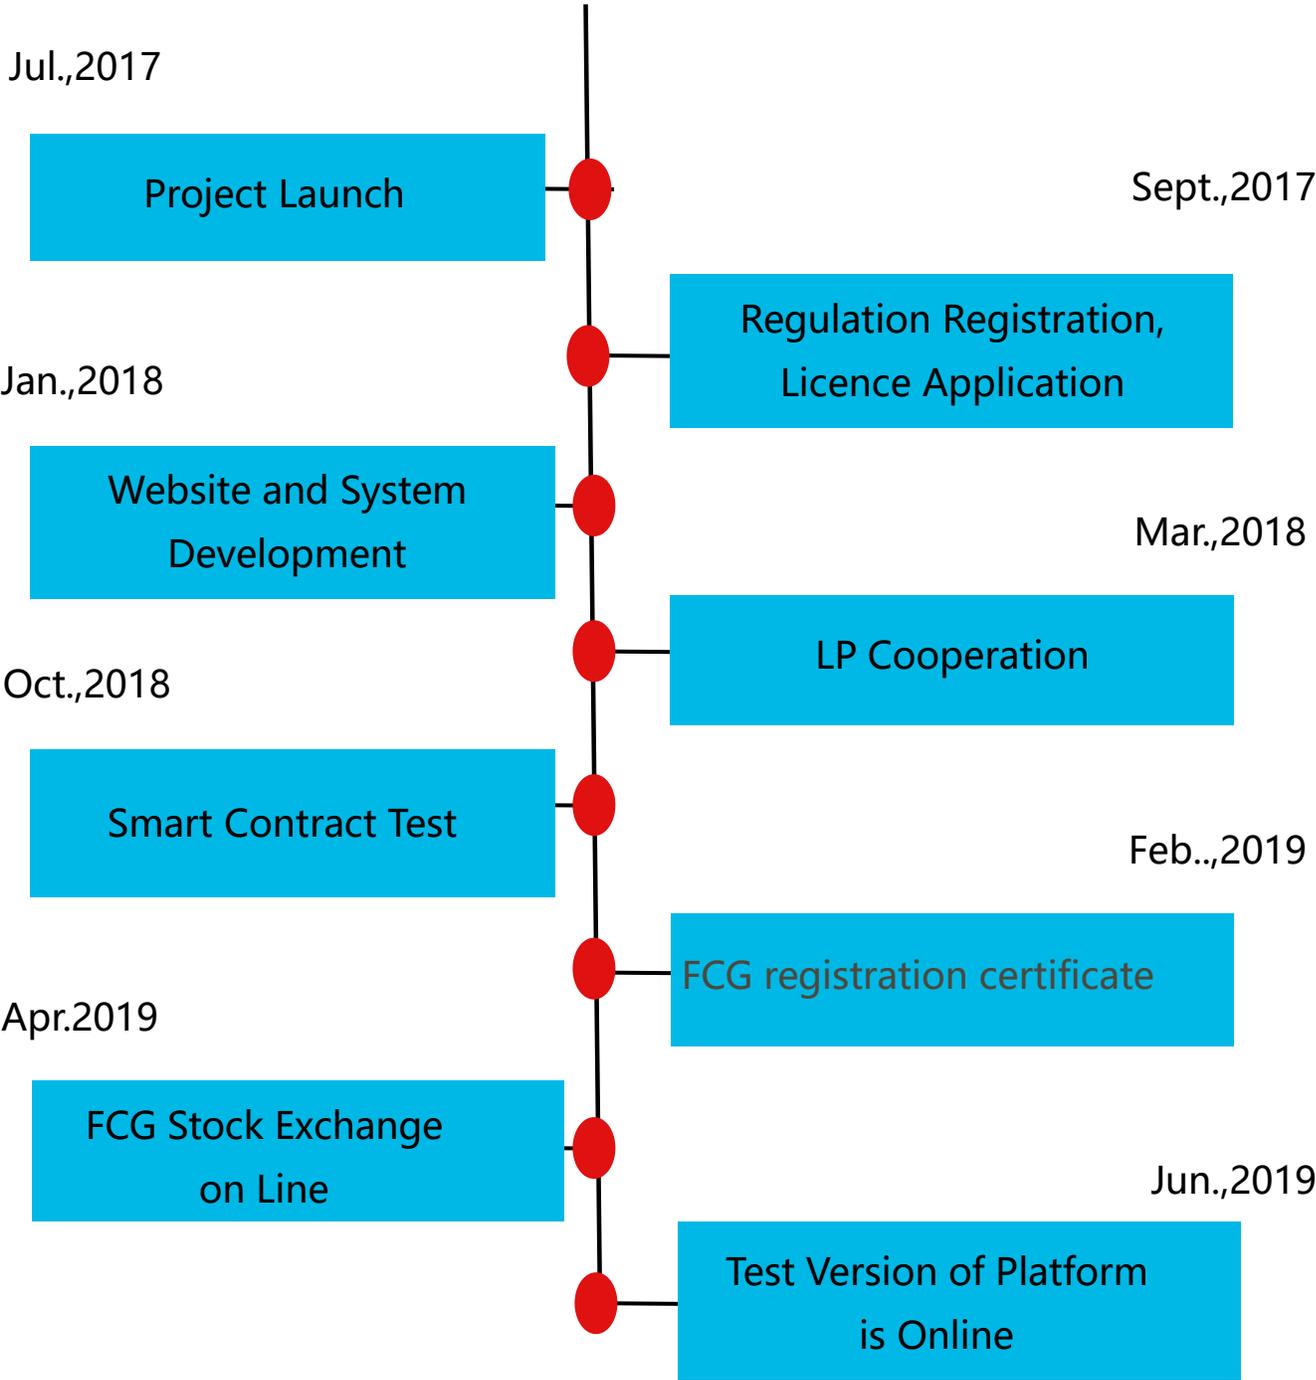

Market Value Management

It is used to guarantee the stability of the FCG value and pay the management fee. FCG for market value management accounts for 10% of the total issuance.

Super Partner

We will recruit capable partners from all over the world to contribute to the rapid development of the company. FCG for super partner accounts for 10% of the total issuance

Development Planning and Path

Risk Warning

FCG Team will regulate the management of the project in accordance with the white paper content disclosed. The potential risks of the project are as follows:

1.Compliance Control Risk

FCG will recruit a professional consulting team to design the issuance and application of digital assets under the conditions of compliance and legality in accordance with the project nature, thus ensuring the normative operation of the project.

2.Policy Risk

FCG will not engage in ICO financing operation according to relevant national policies.

3.Technical Risk

Given the fact that FCG is developed based on Ethereum blockchain underlying technology, and although Ethereum is developing and running in a relatively stable manner, it may have unknown technical risks in the future. The team of FCG will pay close attention to the development and operation dynamics of Ethereum in time, update technologies constantly.

4.Cyber Hacking Risk

Hackers utilize phishing sites, virus, Trojan and other means to attack the users, the network and others, resulting in more than a dozen incidents of loss caused by users and platforms. In view of the risk of cyber-attacks, we have employed

professional technical security consultants to constantly improve security awareness and capabilities and back up the data timely.
